**Abstract of JP8277218**

**PURPOSE:** To obtain a tablet having a split groove, readily and accurately splittable and capable of improving the impact resistance and a punch for a powder compression molding apparatus provided with a protruding part for forming the split groove capable of making the tablet hardly split.

**CONSTITUTION:** This tablet 1 is provided with a tablet body 3 and a raised part 4 raising from the outer peripheral edge in the end face of tablet body 3 toward the inside in the radial direction and further a split groove 2 for slitting the tablet, passed through and formed relatively to the center line of the tablet on the surface of the raised part 4. The split groove 2 is formed by increasing an angle from 90 deg. and a depth D from the height (d) of the raised part 4, locating both ends of the split groove in the radial direction at boundary positions between the tablet body 3 and the raised part 4 and forming a chamfer from the resultant boundaries A and A<1> toward the inside in the radial direction on both sides of the split groove 2 facing thereto. Furthermore, the punch for forming the tablet having the split groove is equipped with a protruding part for forming the split groove corresponding to the formation of the split groove.
